

Biotix Automation Tips Accurate and Precise

Biotix automation tips are accurate, precise and designed to be instantly compatible on your liquid handler.

Automation tips with Biotix innovation

Biotix automation tips are made with our patented technologies including FlexFit, X-Resin and Blade. FlexFit allows for the automated liquid handler to find a secure seal with less force reducing the wear a tear on your robot head. X-Resin and Blade combine to give you clean delivery with every draw maximizing your sample recovery and ensuring there is no residual sample after full blowout.

Biotix aTIPs undergo the most rigorous QC and QA protocols ensuring your results are accurate, precise, and reproducible.

Printed Accuracy

We test every lot of tips for accuracy and precision in our on site automation lab. %CV values are calculated (accuracy/precision) and printed on each pack box.

Double QC

All automation tips undergo testing before and after sterilization to ensure compatibility and function.

Precision Tips

Biotix tips are molded for straightness and have a tight specification on TIR. This leads to you lining up with your 384 well plate every time.
